Draft 2 – amended 12/10/09**

Release Date:

CRUCIBLE CRUCIAL TO EXPORT SUCCESS

As world leaders in continuous casting technology Rautomead Limited of Dundee Scotland have secured a firm order from Elsan Elektrik Gerecieri SA of Denizli, Turkey to supply an RS 3000/6 copper rod casting machine for use in the manufacture of enamelled wires.

Rautomead's expertise in graphite crucible and electrical resistance heating technology is nowhere better illustrated than by its application to copper wire rod production. Crucially, the all-carbon containment system acts as a strongly reducing environment and avoids risk of ceramic refractory contamination of the molten copper. These factors ensure the highest quality oxygen-free copper rod.

Elsan will be building its own operating platform and cathode feed but in accordance with Rautomead designs.
